THE VOID PDF Studio

A preview of the downloadable WhatsApp document style

Create from a prompt

Send a PDF command with a topic. The bot uses OpenAI to organize the content, then renders the finished document locally using your configured visual identity.

- Custom brand name, accent color, logo, footer, and font
- Automatic page layout and page numbering
- Delivered directly to WhatsApp as a downloadable PDF

Create from existing text

Reply to any text message with the PDF command. The bot turns that material into a clear, polished document while retaining the original meaning.

Change the PDF_* values in your environment to apply your own style.
